A garment with a concealed pocket for storing a firearm or personal items therein. The concealment garment includes a garment to be worn on the upper body of a user, such as a shirt, sweatshirt, jacket, or vest. The garment includes a first opening having a vertical slot that provides access to one or more pockets disposed along an interior of the front side of the garment. Each pocket includes a water-proof or water-resistant bladder having interior volume in order to store personal items therein. The bladder is water-proof or water-resistant so as to prevent items stored therein from becoming damaged. The interior volume of each pocket is accessible through a second opening disposed thereon that is recessed from and aligned with the first opening so as to remain concealed. The second opening is closable via a fastener, such as a zipper or hook and loop material.
